RONALD T. SOKA

NETWORK ENGINEER | NETWORK SECURITY | INFRASTRUCTURE

Harare, Zimbabwe • Email: [add professional email] • LinkedIn: [add profile URL]

PROFESSIONAL PROFILE

Network Engineer with a BSc Honours Degree in Software Engineering and experience supporting enterprise network infrastructure in a public-sector ICT environment. Focus areas include routing and switching, network security, IPsec VPNs, infrastructure monitoring, incident response, and data-centre operations. Combines systematic troubleshooting with a service-oriented approach to availability, change control, documentation, and security.

CORE TECHNICAL SKILLS

Networking	LAN/WAN, VLANs, trunking, routing and switching, OSPF fundamentals, DHCP, NAT/PAT
Security	Cisco ASA, IPsec VPN concepts, firewall policies, network segmentation, access control
Infrastructure	Core switching, data-centre operations, server connectivity, virtualisation labs, migration planning
Operations	Infrastructure monitoring, incident response, fault isolation, change planning, technical documentation

PROFESSIONAL EXPERIENCE

Network Engineer — Ministry responsible for ICT, Zimbabwe

Infrastructure Development & Management

• Support enterprise network infrastructure, connectivity, and service availability across organisational systems and supported institutions.

• Monitor infrastructure health, investigate anomalies, respond to network incidents, and maintain operational records.

• Contribute to routing, switching, firewall, VPN, and network-access troubleshooting while considering security and service continuity.

• Support network and data-centre activities, including connectivity planning, infrastructure refresh work, and technical coordination.

• Prepare technical documentation, incident communications, implementation plans, and handover information for operational stakeholders.

SELECTED PROJECT EXPERIENCE

Site-to-site IPsec VPN

Designed and documented a least-privilege VPN approach for partner access to approved file-transfer services, with scoped traffic and validation steps.

DMZ connectivity troubleshooting

Used layered checks across upstream connectivity, route selection, NAT, firewall policy, and return-path behaviour to isolate network access issues.

Data-centre refresh planning

Contributed to phased planning concepts for cabinet relocation, core-network changes, cooling improvements, and server virtualisation, with validation and rollback checkpoints.

EDUCATION

BSc Honours Degree in Software Engineering — Zimbabwe Open University

CERTIFICATIONS & PROFESSIONAL DEVELOPMENT

• Cisco Cybersecurity Essentials — Cisco Networking Academy (2022)

• Cisco Cybersecurity Operations — Cisco Networking Academy (2022)

• CCNA 200-301 — ongoing study

• Additional learning: IT support, Active Directory, project management, and cybersecurity fundamentals
